I Introduction

This Program Final Environmental Impact Report (EIR) has been prepared by the City of Lodi (City) in accordance with the California Environmental Quality Act (CEQA). The City is the lead agency responsible for ensuring that the proposed Lodi General Plan (General Plan) complies with CEQA.

PURPOSE

The Final EIR includes the Draft EIR and this document, which includes Comments on and Responses to Comments on the Draft EIR, and minor corrections and clarifications to the Draft EIR. It is intended to disclose to City decision makers, responsible agencies, organizations, and the general public, the potential impacts of implementing the proposed General Plan. This program level analysis addresses potential impacts of activities associated with implementation of the General Plan, which are described in Chapter 2: Project Description, of the Draft EIR.

The primary purpose of the Final EIR is to revise and refine the environmental analysis in the Draft EIR, published November 25, 2009, in response to comments received during the 45-day public review period. The review period for the Draft EIR (State Clearinghouse No. 2006022008) was from November 25, 2009 to January 11, 2010. This document, combined with the Draft EIR, constitutes the Final EIR on the project. This Final EIR amends and incorporates by reference the Draft EIR, which is available as a separately-bound document from the City of Lodi Community Development Department, 221 W. Pine Street, in Lodi, and also available on the Internet at http://www.lodi.gov/community_development/general_plan/reports.htm.

The Draft EIR contains some impacts that are significant and unavoidable despite extensive mitigating policies, specifically impacts to traffic and circulation, agricultural resources, climate change and greenhouse gases, air quality, and noise. Other potentially significant impacts can be avoided or reduced to levels that are not significant through implementation of the policies identified in the Draft EIR.

ORGANIZATION

This document contains the following components:

- Chapter 2 lists all of the agencies and individuals that submitted written comments on the Draft EIR; reproduces all comments and provides a unique number for each EIR comment in the page margin.
- Chapter 3 provides responses to comments, numbered, and in order according to the comments in Chapter 2.
- Chapter 4 lists revisions to the Draft EIR by chapter and page, in the same order as the revisions would appear in the Draft EIR. Additional tables and graphics appear at the end of this chapter, also in the same order that they would appear in the Draft EIR.

PROCESS

Upon publication of the Final EIR, the City Council will hold a public hearing to certify the EIR and to consider adoption of the proposed General Plan. The City Council will determine the adequacy of the Final EIR, and, if determined adequate, will certify the document as compliant with CEQA. For impacts identified in the EIR that cannot be reduced to a level that is less than significant, the City must make findings and prepare a Statement of Overriding Considerations for approval of the Project if specific social, economic, or other factors justify the proposed Project's unavoidable adverse environmental effects.

If the City decides to approve the proposed Project for which the Final EIR has been prepared, it will issue a Notice of Determination.

Copies of the Final EIR have been provided to agencies and other parties that commented on the Draft EIR or have requested the Final EIR. The Final EIR is also available at the City of Lodi Community Development Department, 221 W. Pine Street, in Lodi and the City's website at: http://www.lodi.gov/community_development/general_plan/reports.htm.

2 Comments on the Draft EIR

This chapter contains copies of the comment letters and oral comments received on the Draft EIR of the proposed General Plan. A total of 44 comments were received during the 45-day comment period. Additionally, oral comments were heard at a Planning Commission public hearing on the Draft EIR, on December 9, 2009. Each comment letter is numbered, and each individual comment is assigned a number in the page margin. Responses to each comment are provided in Chapter 3 of this document. Please note that only comments on the Draft EIR are addressed in this Final EIR. Where comments are on the merits of the proposed General Plan rather than on the Draft EIR, this is noted in the response. Where appropriate, the information and/or revisions suggested in these comment letters have been incorporated into the Final EIR. These revisions are included in Chapter 4 of this document.

COMMUNITY DEVELOPMENT DEPT CITY OF LODI

December 14, 2009

Konradt Bartlam City of Lodi Planning Division 221 West Pine Street Lodi, CA 95241

Dear Mr. Bartlam:

State Clearinghouse (SCH) Number: 2009022075 City of Lodi General Plan Update EIR - Draft EIR

Staff for the Central Valley Flood Protection Board has reviewed the subject document and provides the following comments:

The proposed project is located within the jurisdiction of the Central Valley Flood Protection Board (Formerly known as The Reclamation Board). The Board is required to enforce standards for the construction, maintenance and protection of adopted flood control plans that will protect public lands from floods. The jurisdiction of the Board includes the Central Valley, including all tributaries and distributaries of the Sacramento River and the San Joaquin River, and designated floodways (Title 23 California Code of Regulations (CCR), Section 2).

A1-1

A Board permit is required prior to starting the work within the Board's jurisdiction for the following:

- The placement, construction, reconstruction, removal, or abandonment of any landscaping, culvert, bridge, conduit, fence, projection, fill, embankment, building, structure, obstruction, encroachment, excavation, the planting, or removal of vegetation, and any repair or maintenance that involves cutting into the levee (CCR Section 6);
- Existing structures that predate permitting or where it is necessary to establish the
 conditions normally imposed by permitting. The circumstances include those where
 responsibility for the encroachment has not been clearly established or ownership and
 use have been revised (CCR Section 6);
- Vegetation plantings will require the submission of detailed design drawings; identification of vegetation type; plant and tree names (i.e. common name and scientific name); total number of each type of plant and tree; planting spacing and irrigation method that will be within the project area; a complete vegetative management plan for maintenance to prevent the interference with flood control, levee maintenance, inspection and flood fight procedures (Title 23, California Code of Regulations CCR Section 131).

December 14, 2009 Konradt Bartlam Page 2 of 2

The permit application and Title 23 CCR can be found on the Central Valley Flood Protection Board's website at http://www.cvfpb.ca.gov/. Contact your local, federal and state agencies, as other permits may apply.

If you have any questions please contact me at (916) 574-0651 or by email jherota@water.ca.gov.

Sincerely,

James Herota

10-SJ-Various City of Lodi General Plan Update SCH 2009022075

Mr. Rad Bartham City of Lodi Planning Division 221 West Pine Street Lodi, CA 95241

Dear Mr. Bartham:

The California Department of Transportation (Department) appreciates the opportunity to have reviewed the Draft Environmental Impact Report (DEIR) for the City of Lodi General Plan. The Department has the following comments:

Traffic Operations Comments

 Refer to Page 3.2-25, Proposed General Plan Policies that Reduce the Impact Section T-NEW. This section discusses applying a standard of Level of Service (LOS) E during peak hour conditions on all streets in the City's jurisdiction. Please remember State Route 12 (Kettleman Lane) is a Caltrans State Highway and the minimum LOS standard is D.

A2-1

Refer to page 3.2-9, Trucking. We would like the City of Lodi STAA Truck Routes Map included in the Lodi General Plan.

A2-2

3. In order to maintain the integrity of the State Highway System (SHS), proposed developments with potential impact to the SHS will need to be reviewed by Caltrans. Projects impacting the State Highway System may require a Traffic Impact Study (TIS) in order to determine the operational mitigation measures necessary to remediate the identified transportation impacts. The TIS will need to be completed per Caltrans' Guide for the Preparation of Traffic Impact Studies, December 2002. The TIS should include all approved and pending projects within the vicinity.

A2-3

A2-4

4. Please remember, the City of Lodi General Plan should be consistent with Caltrans' Ramp Metering, HOV, and Park-and-Ride Plan as a means to further reduce traffic congestion.

Travel Forecasting Comments:

- 1. Table ES-1: General Plan Population, and Employment Potential The housing, population and employment in the General Plan appear to be inconsistent with SJCOG underlying data. The date in the DEIR for the proposed City of Lodi General Plan Update is higher than SJCOG's underlying data. Regardless of which alternative is chosen, Caltrans recommends the City of Lodi work with SJCOG to update the regional land use projections in the next RTP by incorporating the higher numbers in the Lodi General Plan Update. This will ensure approved transportation projects with regional impacts can be accurately identified and properly mitigated.
- A2-6 2. Table 3.1-2: Housing Units, by Type Please clarify what type of units "2 to 4 units" and "5 or More Units" are so that we can determine the trip generation.
- 3. Table 3.2-1: Average Daily Traffic Volumes and LOS Thresholds Please specify what highways under "Facility Type" and amount of truck volumes under "Daily Volume".
- 4. Table 3.2-3: Citywide Transportation Analysis Results for the Proposed General Plan Please explain how "Total Vehicle Trips" were computed and provide trip generation tables.
 - 5. Table 3.2-4: Existing and Proposed General Plan Average Daily Traffic Volumes and Levels of Service Please explain how the "Proposed General Plan Daily Traffic Volume" was forecasted and to what year. The DEIR shows existing daily traffic volumes for SR-99 NB/SB Eight Mile Rd. to Armstrong to be 53,000 and the 2008 Caltrans ADT volumes at this same location show 62,000. Please explain this substantial difference.
 - 6. The Department requests that the DEIR address the potential traffic impacts of the City of Lodi's growth on SR 99 and Interstate 5. It is recommended that a traffic mitigation "fair share" fee program be considered with the adopting of the General Plan to address Lodi's growth impacts on the State Highway Transportation System. These projects should be clearly identified as funded through the impact fee program in the DEIR. For example, not mentioned in the DEIR are SR-99

New Capacity projects. The widening of SJ99 four to six lanes from Junction 12 east to the Sacramento County line. The SJ-99 four to six lane widening from north of Harney Lane to junction Highway 12 east was also not mentioned.

7. Air Quality – Please send the DEIR to the San Joaquin Valley Air Pollution Control District (SJVAPCD) for review.

A2-11

System & Advanced Planning Comments:

- 1. In addition to multimodal and Travel Demand Modeling measures to reduce traffic, please consider other methods to maintain and enhance level of service (LOS) standards on State Routes through Lodi such as access management, site design, and on-site development circulation.
- 2. In order to accommodate future growth in the city and surrounding areas, please remember to insure and preserve adequate right of way for future State Route improvements to the mainline, ramps and bridges, light rail, and off-road bike, pedestrian trails.

A2-13

3. The following items were left out of the City of Lodi General Plan Update, but should be included in future General Plan Updates:

A2-14

- Provision of a truck route map in the document which includes how plans
 are being made to link major industrial centers and shopping centers to rail
 line distribution centers, and STAA truck routes and establish where there
 are all significant STAA truck route gaps. Delineate all gaps on a map, and
 establish methodologies including funding as to how these gaps will be
 addressed over a specific time period.
- Include discussion of what efforts are being made with adjacent jurisdictions to provide connectivity for larger sized or STAA trucks.

<Mr. Rad Bartham> <January 11, 2010 <Page 4

Thank you for continuing to coordinate and consult with the Department to identify and address potential cumulative transportation impacts that may occur within this geographical location. This will assist us in ensuring that traffic safety and quality standards are maintained for the traveling public on existing and future State transportation facilities.

Sincerely,

TOM DUMAS, Chief

Office of Metropolitan Planning

Konradt Bartlam City of Lodi 221 W Pine Street Lodi, CA 95240

Re: Notice of Completion-Draft Environmental Impact Report (DEIR)

SCH # 2009022075-City of Lodi General Plan Update

Dear Mr. Bartlam:

As the state agency responsible for rail safety within California, the California Public Utilities Commission (CPUC or Commission) recommends that development projects proposed near rail corridors be planned with the safety of these corridors in mind. New developments and improvements to existing facilities may increase vehicular traffic volumes, not only on streets and at intersections, but also at at-grade highway-rail crossings. In addition, projects may increase pedestrian traffic at crossings, and elsewhere along rail corridor rights-of-way. Working with CPUC staff early in project planning will help project proponents, agency staff, and other reviewers to identify potential project impacts and appropriate mitigation measures, and thereby improve the safety of motorists, pedestrians, railroad personnel, and railroad passengers.

We concur with the City of Lodi in addressing rail safety in the DEIR;

On pages 2-16-17, Community Design and Livability, Transportation, Improve railroad crossings to minimize safety hazards and allow for additional capacity improvements.

Page 2-19, Support grade separated railroad crossings, where feasible and other appropriate measures adjacent to railroad tracks to ensure the safety of the community.

Page 3-2-22, Traffic and Circulation section under Significance criteria, implementation of the proposed General Plan would have a potentially significant transportation/traffic if it would; Conflict with adopted policies, plans or programs supporting alternative transportation modes, such as rail transit, buses, bicycles, vanpools and walking.

We recommend that the City incorporate any improvements to the at-grade railroad crossings and rail corridors into the existing City mitigation fee program to ensure that improvements get programmed with an actual funding mechanism. This will also address project specific and cumulative impacts of new development projects to rail facilities. Otherwise, the burden could eventually fall on one project or the City, depending on the level of significance and or safety concerns. This could potentially affect the entitlement process for future development projects according to CEQA.

A3-1

Rad Bartlam Community Development Director City of Lodi P. O. Box 3006 Lodi, CA 95241

CITY OF STOCKTON COMMENTS ON THE DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CITY OF LODI GENERAL PLAN

Thank you for the opportunity to review and comment on the Draft Environmental Impact Report (DEIR) for the above-noted General Plan. Staff respectfully offers the following comments:

 Land Use Policies: To ensure that future growth will proceed in an orderly manner, Lodi has proposed to designate an Urban Reserve Boundary (URB) beyond the existing City limits shown on the Land Use Diagram. We recommend that the following land use polices or measures for the URB be included in the General Plan and the DEIR:

A4-1

- (1) that Lodi expands the URB only when applicable General Plan policies can be met and appropriate services and adequate infrastructure can be provided; and
- (2) future urban development in the URB be in conformance with Lodi's adopted master utility and circulation plans.
- 2. Land Use Policies, Growth Management and Infrastructure: Stockton's adopted General Plan has designated an open space/agricultural land use along the northern boundary as a buffer zone between the City of Stockton and the City of Lodi. We recommend that Lodi also take into consideration the same land use designation up to its southern Sphere of Influence boundary in order to provide a more meaningful and effective greenbelt buffer.

3. The DEIR indicates that the Armstrong Road Agricultural Cluster Study Area will be designated with agricultural, open space or large-lot rural residential use to ensure maintenance of this area as greenbelt. For consistency purposes, the proposed study area on the land use diagram should reflect this policy and show a future land use designation in that area.

^ / ^

Comments on the DEIR for City of Lodi General Plan January 11, 2010 Page 2 of 2

A4-4

4. Traffic and Circulation: It appears that the traffic analysis did not consider potential impacts to arterial roadways including Lower Sacramento Road and West Lane south of Harney Lane, which is within the proposed Lodi General Plan boundaries and should be to Armstrong Road.

A4-5

5. Public Facilities: In order to provide protection to the public through effective fire protection services and the incorporation of the fire safety features in new and existing development, the General Plan and the DEIR should include a fire response time which may be used to determine future fire station needs under Growth Management and Infrastructure Element Policies.

Should you have any questions regarding this matter, please do not hesitate to contact me at 937-8212 or Community Development Director Mike Niblock at 937-8444.

Dear Mr Bartlam.

Re: ALUC Review - City of Lodi's Draft Environmental Impact Report (DEIR) Lodi General Plan: SCH# 2009022075

Thank you for the opportunity to comment on this important document. The San Joaquin Council of Governments, in carrying out the duties of the County's Airport Land Use Commission (ALUC), has reviewed the above-referenced document with respect to safety and regional aviation land use planning pursuant to the California Environmental Quality Act (CEQA). The following comments are offered on behalf of the ALUC:

- 1) As discussed with the DEIR, there are two public use airports that are located within the planning boundaries of Lodi's General Plan; Lodi Airpark and Kingdon Executive Airport. The 2009 Airport Land Use Compatibility Plan (ALUCP) gives detailed information on the existing and future operations of these two airports. Also within the ALUCP, zones of compatible land uses have been established surrounding each respective airport's "Area of Influence" (AIA). Special commendation is noted for including the recently approved compatibility map in the DEIR and incorporating a discussion within the Land Use, Noise, and Hazards sections. Although not enough information has been submitted to the ALUC for detailed consistency analysis of the future land uses as they relate to the compatibility zones, the general land use patterns appear to be consistent.
- 2) Since neither of the airports AIA's fall within Lodi's City limits, it is the ALUC's understanding that the County of San Joaquin will be the lead agency for any future projects that fall outside of the city limits but within Lodi's

Sphere of Influence. However there may be exceptions to this for certain projects resulting in Lodi taking the responsibility as the lead agency. In either circumstance, the ALUC requires notification from the lead agency at the time of application. Upon notification and submittal of required project information, ALUC staff will make the determination the project's consistency with the most recent adopted Compatibility Zones.

Thank you for the opportunity to review and comment on Lodi's General Plan. If you have any questions please call the ALUC's staff planner, Laura Brunn, at (209) 235-0579.

Sincerely,

DANA COWELL

Dear Mr. Bartlam.

Re: CMA Review - City of Lodi's Draft Environmental Impact Report (DEIR) Lodi General Plan: SCH# 2009022075

Thank you for the opportunity to comment on this important document. As the County's designated Congestion Management Agency, the San Joaquin Council of Governments (SJCOG) has reviewed the above-referenced document with respect to traffic impacts pursuant to the California Environmental Quality Act (CEQA).

The establishment of a Regional Congestion Management Program (RCMP) is required by State Government Code, Section 65088 – 65089 10 and the County's Measure K Renewal Ordinance, Section 1 The purpose of the RCMP is to monitor the cumulative transportation impacts of growth of the regional roadway system, establish a level of service standard, identify deficient regional roadways and develop plans to mitigate the deficiencies, and encourage travel demand management and operational preservation.

The following roadways within Lodi's jurisdiction are monitored as part of the adopted RCMP Roadway Network.

Harney Ln. – Lower Sacramento Rd. to SR 99
Hutchins St. – Harney Rd. to Kettleman Ave (SR 12)
Lower Sacramento – Harney Lane to Turner Rd
Kettleman Lane (SR 12) – West City Limit to SR 99
Victor Rd. (SR 12) – SR 99 to East City Limits
Turner Rd. – West City Limits to Lower Sacramento Rd.
SR 99 – Northern to Southern City Limits

One of the major implementation actions of the RCMP is to establish and monitor Level of Service (LOS) conditions on the Network and to assess where any deficiencies exist. A roadway segment is considered deficient if operating at a LOS of "E" or "F" (as calculated per the RCMP's adopted methodology). It should be noted that part of the methodology for determining the LOS includes the deduction of all interregional trips (pass-through trips that originate outside of the county), traffic generated from low-income housing, and traffic generated by high-density residential located within one-fourth mile of a fixed rail passenger station from the volumes. Once a deficient roadway segment is identified, the agency where the majority of a deficient segment physically lies will have twelve months to prepare a Deficiency Plan. Government Code Section 65089.4 details the required analysis and components of a Deficiency Plan.

A6-1

Upon implementation of the proposed General Plan's land uses, the DEIR anticipates that several of the roadways listed on page one will exceed the CMP Program's adopted LOS standards; with impacts to Kettleman and SR 99 being significant and unmitigable. CMP statute provides that, regardless of any overriding considerations that the City of Lodi may adopt as part of the FEIR, the jurisdiction will be required to prepare a Deficiency Plan at the time the roadway becomes deficient.

A6-2

Although roadway segments operating at LOS "D" (per RCMP methodology) are not considered deficient within the RCMP, this standard does trigger a requirement. Roadway segments operating at LOS "D" are subject to the preparation of a plan that analyzes specific strategies for operational preservation and transportation demand management. SJCOG is currently preparing a Regional Travel Demand Management Action Plan the will give future guidance. SJCOG does recognize and commends the City on its incorporation of the policies that tie directly to the intent of the Regional Congestion Management Program.

A second major implementation action of the CMP is the CMA's requirement to analyze and comment on future land uses that may impact roadways located within the RCMP network. The *Land Use Analysis Process* was adopted as part of the 2007 Regional Congestion Management Plan and is also part of state CMP Legislation (Section 65089) and the Measure K Renewal Ordinance. SJCOG now receives referrals from member jurisdictions development proposals for review, analysis and follow-up action where appropriate as part of RCMP implementation. Based on analysis using the RCMP process, proposals resulting in a degradation of LOS conditions require the identification and implementation of mitigation measures to resolve or mitigate the identified impact(s).

A6-3

As future land use projects that generate 125 or more peak hour trips go forward with the entitlement process, SJCOG, in implementing the RCMP, will require that the potential impacts to roadways be analyzed within the project's Traffic Impact Analysis (TIA) and accompanying EIR. The TIA and EIR should each contain a section that specifically addresses requirements and standards of the Regional Congestion Management Program.

Thank you for the opportunity to review and comment on Lodi's General Plan. If you have any questions please call the RCMP's lead planner, Laura Brunn, at (209) 235-0579. We would be pleased to meet with the city concerning these comments if that would be helpful.

Sincerely,

DANA COWELL

RE:

LODI GENERAL PLAN DRAFT ENVIRONMENTAL IMPACT REPORT

SCH #2009022075

Dear Mr. Bartlam:

A7-1

The San Joaquin County Community Development Department appreciates the opportunity to review the above referenced document. We have reviewed the Draft Environmental Impact Report (EIR) and offer the following comments.

The draft EIR makes several references to the "Armstrong Road Agricultural/Cluster Study Area". This area is entirely within the unincorporated portion of San Joaquin County, and subject to land use authority by the San Joaquin County Board of Supervisors. Although there have been discussions regarding the potential for creation of the Armstrong Road Agricultural/Cluster Zoning classification, the County is not engaged in any studies of this area, nor involved in the preparation of any Specific Plans or other planning programs for this area. On April 21, 2009, the San Joaquin County Board of Supervisors voted to authorize the Community Development Director to sent a letter to the City of Lodi clarifying the Board's position that the City of Lodi must submit the necessary applications for the creation of the Specific Plan and preparation of the EIR and pay all costs associated with the review and processing of the application for the creation of the Armstrong Road Agricultural/Cluster Zoning classification. Pursuant to the Board's action, the enclosed letter was sent to the City of Lodi on April 23, 2009. To date, the City has not submitted any applications or application fees to the San Joaquin County Community Development Department for the creation of the Armstrong Road Agricultural/Cluster Zoning.

If you have any questions, I can be reached at (209) 468-3140. Again, thank you for the opportunity to comment on the City's Draft EIR.

Sincerely,

KERRY SULLIVAN

April 23, 2009

Blair King, City Manager City of Lodi, City Hall 221 West Pine Street Lodi, CA 95240

Dear Mr. King:

Re: Armstrong Road Agricultural/Cluster Zoning Classification

On April 21, 2009, the San Joaquin County Board of Supervisors authorized the Community Development Department to send a letter to the City of Lodi clarifying the Board's position that the City of Lodi must submit the necessary applications for the creation of the Specific Plan and preparation of the Environmental Impact Report (EIR) and pay all costs associated with the review and processing of the applications for the creation of the Armstrong Road Agricultural/Cluster Zoning Classification. Two consulting firms submitted adequate proposals for preparation of the Specific Plan and EIR. Mintier Harnish's proposal is for \$483,486.00 and Augustine Planning Associates is for \$366,208.00. As both proposals meet the requirements of the Request for Proposal, the Community Development Department would like to award the contract to Augustine Planning Associates in the event that the City of Lodi elects to go forward with the project. The total cost for the Specific Plan and EIR would be \$488,108.00, based upon the consultant fee plus the County's administrative fees of 26.5% of the cost of the EIR, plus 35% of the cost of the Specific Plan. Enclosed is an application form for the Specific Plan.

Section 9-806.2 (enclosed) of the Development Title states that:

Applications for Specific Plans or Specific Plan Amendments may be initiated by the Board of Supervisors, Planning Commission, Director of Community Development, or the property owner or the property owner's authorized agent.

Since the City of Lodi will be the applicant, the City will serve as the "property owner's authorized agent." When the City submits the fees and application materials, the City also needs to submit documentation in writing from the property owners within the

Letter to Blair King Armstrong Road Cluster Zone April 23, 2009 Page2

proposed project area that the City of Lodi is representing them in the application process.

Please contact me if you have any questions. I can be reached at (209) 468-3140.

Sincerely,

KERRY SULLIVAN,

DIRECTOR

Comments to Planning Commission Regarding Draft General Plan and Draft EIR Water and Infrastructure

12/9/09 Jane Wagner-Tyack 145 South Rose Street, Lodi

1. Issues raised in 10/20/09 email to Mr. Bartlam

• The graphic on page 3-9 of the Draft General Plan is misleading because it minimizes the contribution of groundwater (well water) to Lodi's water supply. The graphic should show that we rely primarily on groundwater, that the time frame for recharge is quite long, and that the water does not necessarily become available in the future in the same place where it entered the ground originally. At a minimum, the title of the graphic should be changed.

B1-1

• On page 3-10, right-hand column, third paragraph, the Draft General Plan says, "As the city grows, the available safe yield of the underlying groundwater will increase." This is a puzzling statement for which there appears to be no justification. At a minimum, the statement requires some explanation.

The Draft EIR actually addresses this by explaining (page 3.13-1) that the City will reduce its groundwater pumping from over 17,000 acre feet in 2008 "to a safe yield of approximately 15,000 acre-feet per year. This safe-yield estimate reflects an acreage-based relationship. Therefore, as the City's land area increases, the estimated safe yield of the underlying aquifer will likely increase."

Given the unpredictability of groundwater, this seems like a tenuous solution to Lodi's water supply needs. In addition, the connection between more city acreage and more access to groundwater constitutes a perverse incentive tending to encourage unsustainable urban growth and loss of agricultural land. As a policy, this should be discouraged.

B1-2

On page 3-17, the Draft General Plan says "Use of gray water or rainwater for non-potable uses may require installation of dual plumbing systems." Pages 3-33 – 3-34 (GM-P12) says "Support on-site gray water and rainwater harvesting systems for households and businesses" – I encourage the city to pursue these alternatives.

B1-3

A careful reading of the Draft General Plan makes it clear that water supply and wastewater treatment options do not support projected growth. Rather than point out relevant sections in that draft, I have noted them below in comments on the Draft EIR.

2. Comments on the Draft EIR

B1-4

• The correct formal name of the Delta is the Sacramento-San Joaquin Delta. The area is also correctly referred to as the San Francisco Bay-Delta Estuary.

B1-5

Camanche Reservoir is misspelled.

B1-6

• This page refers to Figure 3.7-1 regarding Groundwater Basins, but the figure itself doesn't specifically identify groundwater sub-basins, only watersheds. The title of the graphic is "Regional Watersheds and Waterways." The identification of groundwater basins needs to be more clear.

In categories related to hydrology, water quality, and infrastructure, the Draft EIR identifies the impact of the General Plan as "less than significant" and reports that no mitigation is required, in some cases because "[the] impact would be mitigated by existing State and local regulations and proposed General Plan policies." This wording undoubtedly meets regulatory requirements, but I urge you to exercise common sense in addressing the spirit as well as the letter of the regulations with respect to water supply and wastewater treatment. Specifically:

B1-7

• "Upon construction of the new surface water treatment plant, the City would have a long-term water supply of 27,000 acre feet per year available from its current safe yield of groundwater and the future surface water supplies." The Draft General Plan (page 3-10) assumes that even with a 15% reduction in residential demand due to the installation of water meters, "the total city-wide demand at reasonable development [would be about] 29,380 acre-feet per year." That is a shortfall of 2,380 acre-feet per year under a best-case scenario for both supply and demand.

R1_8

• The Draft General Plan, (page 3-23) and the Draft EIR (3.13-20 and 21) list inadequacies in the City's wastewater facilities. The Sewer Outfall from the City to the WSWPCF does not have adequate capacity for the PWWF [peak wet weather flows] at reasonable development of the General Plan. The City is already aware that expansion of WSWPCF will be required in the near future, and a tertiary filtration facility is part of that plan.

Wastewater discharge by cities in the Delta region has come under increasing scrutiny, not just because it affects the quality of export water (which we might like to assume is not our problem) but because it adversely affects fish and other species and their habitat in the Delta and the Estuary. This is our problem. Although I don't know the details, I believe the California Sportfishing Protection Alliance has already challenged Lodi's treatment of some of its wastewater. The City should be aware that pressure is increasing from the State for cities in the Delta region to treat their wastewater discharge to a very high level—likely higher than we have planned for.

Recommendations

The City should aggressively pursue gray water systems, rainwater harvesting and cisterns, dry wells, and water recycling in addition to rigorous water conservation, including increased use of drought-tolerant landscaping by the City itself. The dual plumbing systems necessary for gray water and harvested rainwater use are allowed under this General Plan. The City should revisit the issue of the cost-effectiveness of delivering recycled water to potential demand locations. The existing Water Conservation Ordinance needs to be strictly enforced, and the City itself should be following the Ordinance. Efforts at public education need to be increased, with the City considering incentives as well as penalties with respect to wise water use.

B1-9

The Draft EIR makes it clear that there is no lack of State regulations and local plans and ordinances addressing water issues, and General Plan policies require planning for water supply and availability before development takes place. Necessary infrastructure must be provided in a "timely" manner—but in practice, we know that budgetary constraints do not allow the City to meet this requirement in every case.

It is the job of city planners to take growth projections, however they are arrived at, and give decision-makers a plan that provides for that projected growth. It is possible to make assumptions and update demand and supply calculations in ways that support that projected growth. However, it falls to Lodi decision-makers to connect the dots in this General Plan without relying on optimistic assumptions or estimates. The Draft General Plan and Draft EIR clearly show that water availability and wastewater treatment place inescapable constraints on Lodi's growth. I urge you to require a General Plan that acknowledges actual, realistic limits on water availability, wastewater treatment, and the City's ability to provide necessary water infrastructure, allowing for growth only within those realistic limits.

B1-10

The Final EIR requires responses to public comments. I look forward to seeing these comments addressed there.

City of Lodi Community Development Department Lodi City Hall Post Office Box 3006 Lodi, California 95241-1910

Re: City of Lodi General Plan EIR

Dear Members of the Lodi Community Development Department:

These comments on the City of Lodi General Plan Draft Environmental Impact Report are submitted on behalf of property owners generally located in the southern part of the City's General Plan and generally described in the draft General Plan as Alternative A. Several members of the client group presently enjoy the PRR General Plan designation. My client group favors Alternative A and favors retaining the PRR General Plan designation (or its new equivalent) in the new general plan.

1. The PR designation contains special rights that should not be obliterated by this new General Plan.

By way of background three local families, the Fry, Costa, Beckman, and Fink families, actively participated in the 1990 Lodi General Plan update. Specifically they asked that their property be included in the General Plan so that ancillary infrastructure plans, such as water, sewer and storm drain, could be designed to include their properties. After more than fifteen presentations to the planning commission and city council, the city council agreed to include these properties in the General Plan with a designation of PRR and agree that infrastructure plans would be designed to include capacity for these territories. As a condition for this city action the City required the landowners to enter into a formal agreement with the City to pay for their fair share of oversized infrastructure. A formal agreement was negotiated and submitted by City Attorney Bob W. McNatt to the City Council for approval. The City Council approved the agreement as recommended by staff.

It is vital to note that during the course of these numerous hearings no member of the public appeared and opposed the request of these three families.

The essence of the agreement focuses on the property owners' promise to pay their fair share contribution to oversize a sewer line that could serve their properties. The property

City of Lodi Community Development Department January 8, 2010 Page 2 of 3

owners agreed to pay their fair share contribution when the City of Lodi demanded that payment be made. Subsequently, on July 11, 1997, the City Attorney authored an opinion about the agreement, stating:

"Your current clients (Fry, Costa, Beckman and Fink) have a beneficial interest in the improvements which they may wish to save by seeking specific performance on their behalf. The sizing and location of the improvements is directly for the benefit of your current clients, not for the benefit of the City."

(Emphasis and underlining added.)

Indeed, the City subsequently, in May 2003, made a demand based upon the Agreement for the property owners to pay their fair share for oversizing the sewer line. The property owners promptly satisfied the City's demand by submitting \$177,789.72 as their fair share for oversizing the sewer line.

As the City Attorney has opined, the oversizing of the sewer line is for the benefit of these property owners and not for the benefit of the City. If the City takes away the PRR designation then these property owners will be deprived of the benefit of their bargain from the Agreement and will have relied upon City actions to their detriment. Hence notions of fairness and minimum legal requirements compel the City to retain the PRR designation or equivalent for these properties.

Since these properties need to retain a land use designation signifying that the properties are expected to build out during the General Plan planning period it makes sense to include the remainder of Area A within the General Plan.

2. <u>Alternative A is the Environmental Superior Alternative for the General Plan and can facilitate the City's two percent growth policy</u>.

The Draft EIR admits that Alternative A is the environmental superior alternative. (DEIR at e-6, 4-20.) It has "fewer vehicle trips, miles of travel, hours of travel and hours of delay than the proposed general plan." (DEIR at 4-8.) It has "reduced impact to agricultural resources (DEIR at 4-9) less VTMs (DEIR at 4-10), and less demand for fire, police and other emergency services. DEIR at 4-17.

The DEIR's criticism of Alternative A is that is cannot independently facilitate meeting the City's two percent growth policy and therefore this policy will not be attained and ambient growth pressure will be redirected to other communities.

City of Lodi Community Development Department January 8, 2010 Page 3 of 3

This analysis is fatally flawed for two reasons:

First, an environmentally superior alternative does not need to match all of the project objectives in order to be a viable alternative. See

Second, this means that Alternative A can be matched or blended with either the preferred alternative or with another alternative and facilitate the two percent growth policy. To the extent this method places additional land into the general plan than may be anticipated for development during the general plan's planning period, the City's annexation policy can control the rate, location and timing of the City's expansion with an eye toward the efficient provision for services, environmental considerations and preservation of agricultural lands.

In short, the Draft EIR ineffectively dispenses with the environmental superior alternative by designing false choices. Correctly framed, the issue isn't whether Alternative A should be adopted to the exclusion of the preferred alternative. Instead the correct way to view the question is whether Alternative A (the environmentally superior alternative) can be integrated into another alterative with the City's future growth pattern determined by the City's annexation policy.

In advance, thank you for your attention to these comments.

Very truly yours,

STEVEN A. HERUM Attorney-at-Law

City of Lodi Community Development Department Lodi City Hall Post Office Box 3006 Lodi, California 95241-1910

Re: City of Lodi General Plan Draft EIR

Dear Lodi Community Development Department,

Alternative A should be adopted or integrated into the Draft Preferred General Plan Alternative for several reasons:

B3-1

- It is the environmentally superior alternative
- It is the most logical progression of the City's growth is to the South due to the current planning designation of PRR which was established in the 1991 General Plan and should not be removed and placed to the West side of the City
- o It retains the PRR General Plan designation (or as it is called in the new General Plan, Urban Reserve [UR]) in the new general plan.
- It does not revoke the decision or the integrity of past city council members of establishing the PRR zone [South of Harney Lane, North of Armstrong Road, East of Lower Sacramento Road and west of Highway 99].
- O It does not revoke the good faith effort/cooperation Armstrong Road Property Owners have done to research and propose the Armstrong Road Agricultural Cluster Zoning Concept. In the property owners good faith effort they have never stated over the many years of discussion of taking away or removing the PRR zoning south of Harney Lane. So it would be of bad faith and poor cooperation for the City of Lodi to remove the PRR south of Harney and place it on the West side.

B3-2

The DEIR does not state what factors caused the Urban Reserve or PRR to be moved from South of Harney to the west side, when the most recent developments have been south of Harney Lane [The Blue Shield Project and the new Costco Project in 2010]. So it would be a logical conclusion for the city to grow south due to all the infrastructure planning south of Harney Lane

B3-3

- The definition of UR is as follows: The Plan identifies Urban Reserve areas to provide additional area for development, if sufficient capacity to accommodate growth in the initial phases is not available.
- So to fulfill the growth needs of Lodi, Urban Reserve should be maintained in the area described above south of Harney Lane and North of Armstrong Road. If more area is needed to fill growth needs then establish a west side Urban Reserve

B3-4

- Of the 16 topics [Land Use & Housing, Traffic & Circulation, Agricultural Resources, Biological Resources, Cultural Resources, Climate Change & Greenhouse Gases, Hydrology and Water Quality, Air Quality, Flood Hazards, Seismic & Geologic Hazards, Noise, Hazardous Materials & Toxics, Infrastructure, Public Facilities, Parks & Recreation and Visual Resources] evaluated in the DEIR, the Hydrology and Water Quality topic should be evaluated in more detail
 - O Supply: What are the back-up procedures if 1, 2, 3 or more ground water pumps go dry or malfunction? Are water contracts in place for replacement? How fast can water be reestablished? Where would the city get their water? How does that affect agriculture? What are the costs associated with all the different options? Also, it is vital that the City of Lodi go forward as quickly as possible with the water treatment plant to use the banked Woodbridge Irrigation District surface water rather than pumping ground water. By pumping out of the over drafted ground water aquifer it has detrimental effects on the agricultural farming businesses surrounding the City of Lodi. As the saying goes, "No Water No Farming, No Farming No Food, No Food No Economy." Agriculture is the

B3-5

B3-6

economic engine in Lodi and San Joaquin County. According to an Economic Impact Report done by the Lodi Winegrape Commission and the Lodi District Grape Growers in 2009, wine and winegrapes alone have a \$5 billion economic impact to San Joaquin County. So, the City of Lodi needs to help in every way possible to keep agriculture economically viable which in turn keeps the City of Lodi economy moving. One step would be by switching their source of water from ground water to surface water.

B3-7 would be
O Demand
O Quality
Policy changes
O C-P8 Add

- C-P8 Adopt an agricultural conservation program (ACP) establishing a mitigation fee to protect and conserve agricultural lands:
 - Comments: When establishing the ACP, besides the City of Lodi residents and
 policy makers, surrounding property owners in San Joaquin County, the San
 Joaquin Farm Bureau and other agricultural interests should be fully involved in
 the process of establishing the ACP and mitigation fee
 - The ACP should encourage that conservation easement locations are prioritized but a ratio [agricultural land: land developed] and fee should not be established or set until the ACP is finalized
- Existing language: C-P2: Work with San Joaquin County and relevant land owners to
 ensure economic viability of grape growing, winemaking, and supporting industries, to
 ensure the preservation of viable agricultural land use. New language: C-P2: Work with
 San Joaquin County, the City of Stockton, the City of Galt, San Joaquin Farm Bureau and
 surrounding land owners to ensure economic viability of all agricultural businesses and
 supporting industries to ensure the preservation of viable agricultural land use

Thank you for allowing my comments and taking them into consideration.

Bruce Fry 22000 Lower Sacramento Road Acampo, CA 95220

JAN 1 1 2010

COMMUNITY DEVELOPMENT DEPT

January 10, 2010

City of Lodi Community Development Dept. Attn: Mr. Bartlam, Director Lodi City Hall P.O. Box 3006 Lodi, Ca. 95241

SUBJECT: Draft General Plan And Environmental Impact Report.

Dear Sir,

We, desire to make some comments concerning the City of Lodi's Draft General Plan, and the related Environmental Impact Report (EIR). Our concerns and comments follow:

Numerous years, countless hours, and significant expenses have been incurred trying to create a Community Separator along Armstrong Rd. separating the Cities of Lodi and Stockton.

The Armstrong Rd. property owners diligently met and cooperated with the City of Lodi, and San Joaquin County trying to arrive at a workable separator. However as of this date, nothing has happened. The plan for rezoning the proposed separator under county jurisdiction appears to have stagnated.

The current City of Lodi 1991 General Plan, designates the area South of Harney Ln., extending to The North side of Armstrong Rd. as Planned Residential Reserve (PRR). The new Preferred Draft Lodi General Plan, has removed the PRR designation from The North side of Armstrong Rd, extending a half mile south, and replaced it with the designation of "Armstrong Rd. Agriculture Cluster Study Area." Additionally, as an effort to accommodate the City's 2% growth policy, the new Preferred Draft General Plan designates Urban Reserve (UR) to the west and east of the City limits.

In view of all the cooperation and efforts between the City and the Armstrong Rd. propery owners towards the goal of creating a separator, we are dismayed, that the City of Lodi's Draft Preferred General Plan, does not see fit to retain the current PRR, or the equivalent Urban Reserve (UR) designation for the Armstrong Rd. area. Back in 1991 when the current General Plan was adopted, Area property owners worked diligently, and at significant expense, to obtain the Planned Residential Reserve (PRR) designation for the Harney Ln. – Armstrong Rd. area. Removing the PRR or the equivalent Urban Reserve (UR) designation in the New General Plan, for the Armstrong Rd. area is not in Lodi's best interest.

B4-1

Additionally, the Micke Grove Park area, and Lodi area, has always been synonymous. One would think that the City of Lodi would like to have some say in the future of the Micke Grove area. An urban reserve designation, adjacent to Micke Grove Park, would serve to "earmark" the area for Lodi's future plans.

An additional concern to us is the fact that **the Draft EIR indicates that Alternative A**, **is the environmentally superior alternative.** In addition to other reasons, it indicates that it has a reduced impact on agricultural resources, and is the middle-ground development scenario. The Draft EIR also finds that Alternative A does not fully meet the City's two percent growth policy. However, this could be accomplished by adjusting the planned urban reserve for the East and West boundaries of the City.

The environment is an important consideration affecting our everyday lives, as well as future generations. It appears that to not take heed of the findings of the Draft EIR, and adopting the "\Preferred Plan," which has been approved by the Lodi Planning Commission, contradicts the environmental guidelines established by the State of California.

In conclusion, we feel that the City of Lodi should adopt Alternative A as the "Preferred Plan" to govern Lodi's future.

Thank you for the opportunity to express our thoughts and concerns in this matter.

Sincerely, Joseph L. Manassers

Removing the PRR or the equivalent Urban Reserve (UR) designation in the New General Plan, for the Armstrong Rd. area is not in Lodi's best interest.

B6-1

Additionally, the Micke Grove Park area, and Lodi area has always been synonimous. One would think that the City of Lodi would like to have some say in the future of the Micke Grove area. An urban reserve designation, adjacent to Micke Grove Park would serve to "earmark" the area for Lodi 's future plans.

- An additional concern to us is the fact that, **The Draft EIR indicates that Alternative A, is the environmental superior alternative.** In addition to other reasons, it indicates
 that it has a reduced impact on agricultural resources, and is the middle- ground
 development scenario. The Draft EIR also finds that Alternative A does not fully meet
 the City's two percent growth policy. However, this could be accomplished by adjusting
 the planned urban reserve for the East and West boundries of the City.
- The Environment is an important consideration affecting our everyday lives, as well as future generations. It appears that to not take heed of the findings of the Draft EIR, and adopting the "preferred plan" which has been approved by the City of Lodi Planning Commission, contradicts the environmental guidelines established by the State of California.
- In conclusion, we feel that the City of Lodi should adopt. Alternative A as the preferred plan to govern. Lodi's future.

Thank you for the opportunity to express our thoughts and concerns in this matter.

Sincerely,

Michael J.Manassero 1490 E. Harney Ln. Lodi, Ca. 95242

CITY OF LODI

JAN 1 1 2010 COMMUNITY DEVELOPMENT DEPT

January 10, 2010

City of Lodi Community Development Dept. Attn: Mr. Bartlam, Director Lodi City Hall P.O. Box 3006 Lodi, Ca. 95241

SUBJECT: Draft General Plan And Environmental Impact Report.

Dear Sir,

We, desire to make some comments concerning the City of Lodi's Draft General Plan. and the related Environmental Impact Report (EIR). Our concerns and comments follow:

Numerous years, countless hours, and significant expenses have been incurred trying to create a Community Separator along Armstrong Rd. separating the Cities of Lodi and Stockton.

The Armstrong Rd. property owners diligently met and cooperated with the City of Lodi. and San Joaquin County trying to arrive at a workable separator. However as of this date, nothing has happened. The plan for rezoning the proposed separator under county jurisdiction appears to have stagnated.

The current City of Lodi 1991 General Plan, designates the area South of Harney Ln., extending to The North side of Armstrong Rd. as Planned Residential Reserve (PRR). The new Preferred Draft Lodi General Plan, has removed the PRR designation from The North side of Armstrong Rd, extending a half mile south, and replaced it with the designation of "Armstrong Rd. Agriculture Cluster Study Area." Additionally, as an effort to accommodate the City's 2% growth policy, the new Preferred Draft General Plan designates Urban Reserve (UR) to the west and east of the City limits.

In view of all the cooperation and efforts between the City and the Armstrong Rd. propery owners towards the goal of creating a separator, we are dismayed, that the City of Lodi's Draft Preferred General Plan, does not see fit to retain the current PRR, or the equivalent Urban Reserve (UR) designation for the Armstrong Rd. area. Back in 1991 when the current General Plan was adopted. Area property owners worked diligently, and at significant expense, to obtain the Planned Residential Reserve (PRR) designation for the Harney Ln. - Armstrong Rd. area. Removing the PRR or the equivalent Urban Reserve (UR) designation in the New General Plan, for the Armstrong Rd. area is not in Lodi's best interest.

B7-1

Additionally, the Micke Grove Park area, and Lodi area has always been synonimous. One would think that the City of Lodi would like to have some say in the future of the Micke Grove area. An urban reserve designation, adjacent to Micke Grove Park would serve to "earmark" the area for Lodi 's future plans.

- An additional concern to us is the fact that, **The Draft EIR indicates that Alternative A,**is the environmental superior alternative. In addition to other reasons, it indicates
 that it has a reduced impact on agricultural resources, and is the middle- ground
 development scenario. The Draft EIR also finds that Alternative A does not fully meet
 the City's two percent growth policy. However, this could be accomplished by adjusting
 the planned urban reserve for the East and West boundries of the City.
- B7-3

 The Environment is an important consideration affecting our everyday lives, as well as future generations. It appears that to not take heed of the findings of the Draft EIR, and adopting the "preferred plan" which has been approved by the City of Lodi Planning Commission, contradicts the environmental guidelines established by the State of California.
- In conclusion, we feel that the City of Lodi should adopt Alternative A as the preferred plan to govern. Lodi's future.

Thank you for the opportunity to express our thoughts and concerns in this matter.

Sincerely,
Yatricia M. Manan

Re: City of Lodi Draft General Plan and EIR

Dear Mr. Bartlam:

As a citizen of the Lodi Community, I wish to take issue with the Draft General Plan which the City of Lodi is currently working on. My comments are identified below:

In choosing the currently proposed draft General Plan (referred to as the "preferred Plan") the City is not following the recommendation of The Environmental Impact Report, funded by the citizens of Lodi tax dollars.

B8-1

The ENVIRONMENTAL IMPACT REPORT finds that Alterative A, is the environmental superior alternative. It provides for less impact on the environment, as well as other significant reasons for it's adoption.

I feel that the New Lodi General Plan should Adopt Alternative A as the plan which will govern Lodi's future for the next 20+ years. Do not adopt the currently proposed General Plan.

Attn: Mr. Bartlam

Re: City of Lodi Draft General Plan and EIR

Dear Mr. Bartlam:

As a citizen of the Lodi Community, I wish to take issue with the Draft General Plan which the City of Lodi is currently working on. My comments are identified below:

In choosing the currently proposed draft General Plan (referred to as the "preferred Plan") the City is not following the recommendation of The Environmental Impact Report, funded by the citizens of Lodi tax dollars.

B34-1

The ENVIRONMENTAL IMPACT REPORT finds that Alterative A, is the environmental superior alternative. It provides for less impact on the environment, as well as other significant reasons for it's adoption.

I feel that the New Lodi General Plan should Adopt Alternative A as the plan which will govern Lodi's future for the next 20+ years. Do not adopt the currently proposed General Plan.

B34-2

Sincerely,

(Name) JAKK DIRDE

3 Response to Comments on the Draft EIR

This chapter includes responses to each comment, and in the same order, as presented in Chapter 2. The responses are marked with the same number-letter combination as the comment to which they respond, as shown in the margin of the comment letters.

Proposed General Plan policies are referenced in several responses below. During preparation of the Draft EIR and this Final EIR, additional policy measures and edits to proposed policies were identified to further reduce potential impacts. New policy measures have been assigned with the suffix "NEW" (e.g. T-PNEW). Proposed policies that have been recommended for revisions are assigned with the suffix "EDIT" (e.g. T-P1EDIT); text additions are noted in <u>underline</u> and text deletions appear in <u>strikeout</u>.

AGENCIES

AI: Central Valley Flood Protection Board

A1-1: The City acknowledges that the Central Valley Flood Protection Board's (Board) jurisdiction includes the Mokelumne River, as a tributary of the San Joaquin River and that a Board permit will be required for activities, such as construction or landscaping, within the Board's jurisdiction. This letter does not raise environmental issues under CEQA.

A2: Department of Transportation

- A2-1: The City acknowledges that State Route 12 (Kettleman Lane) is a Caltrans State Highway and that the Congestion Management Program identifies a Level of Service standard of D for this route. The proposed General Plan policies both titled "T-NEW" on page 3.2-25 underscore the City's understanding of the jurisdictional boundaries, stating: "For purposes of design review and environmental assessment, apply a standard of Level of Service E during peak hour conditions on all streets in the City's jurisdiction..." (emphasis added) and that the City will "Strive to comply with the Level of Service standards and other performance measures on Routes of Regional Significance as defined by the County-wide Congestion Management Program."
- A2-2: This comment regarding adding a truck route map to the General Plan represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. For information purposes, it should be noted, a truck route map was provided in an earlier working paper, published in July 2007 as part of the General Plan update process. See Figure 3-5 in "Land Use, Transportation, Environment, and Infrastructure" available on the City's website:
 - http://www.lodi.gov/community_development/general_plan/reports.htm.
- A2-3: The City acknowledges that future development projects may have impacts to the State highway system and, consistent with current City practice, future developments with

the potential to cause significant impacts would be subject to environmental review procedures, including preparation of a traffic impact study. Several General Plan policies are intended to ensure that appropriate reviews are applied. For example, Policy T-P1 ensures consistency between the timing of new development and the infrastructure needed to serve that development, and Policy T-P2 calls for project reviews to ensure that appropriate mitigations are identified and provided. Policy T-P3 commits the City to work collaboratively with San Joaquin County, San Joaquin Council of Governments, and Caltrans to successfully implement transportation improvements in the vicinity of Lodi.

- A2-4: The City acknowledges the importance of consistency between local and regional/State transportation plan and seeks to further reduce Impact 3.2-1, regarding plan consistency by modifying policy T-P3 to read as follows: Work collaboratively with San Joaquin County, San Joaquin Council of Governments, and Caltrans to maintain consistency with regional and State plans, and to successfully implement transportation improvements in the vicinity of Lodi.
- A2-5: The proposed Lodi General Plan presents population and employment projections, shown in Table ES-1 on page E-4. Although projections from the San Joaquin Council of Governments (SJCOG) were reviewed and consulted, the proposed General Plan's projections are based on calculations resulting from land use changes in the General Plan Land Use Diagram. The City acknowledges that projections by SJCOG are used as the foundation for the Regional Transportation Plan, Air Quality Conformity Analyses, traffic modeling, and other planning studies. The agency periodically updates its projections by—among other means—surveying local planning departments. The following proposed General Plan policy assures the City's cooperation:
 - T-P6: Coordinate with the San Joaquin Council of Governments and actively participate in regional transportation planning efforts to ensure that the City's interests are reflected in regional goals and priorities.
- A2-6: The data reported in Table 3.1-2 on page 3.1-4 of the Draft EIR are provided by the California Department of Finance (DOF). DOF does not report a further breakdown of housing units, such as by square footage or the exact number of units in each development.
- A2-7: Table 3.2-1 on page 3.2-3 of the Draft EIR describes Level of Service thresholds and average daily traffic volumes for *typical* roadway types in Lodi. They do not refer to specific streets in the city. Rather they are devised through analysis of Transportation Research Board's Highway Capacity Manual, local factors and planning practice in Lodi and neighborhood jurisdictions, as described on page 3.2-2 of the Draft EIR.
- A2-8: As described on page 3.2-22 of the Draft EIR, the City of Lodi travel demand model was used to determine how the land uses in the proposed General Plan would generate vehicle trips and would contribute to future traffic volumes on the major streets throughout the planning area. A table has been added to page 3.2-22 of the Draft EIR

- to display the trip generation rates used in the Lodi model for each land use category. See Table 4-1 and the trip generation table in Chapter 4 of this Final EIR.
- A2-9: The proposed General Plan has a 20-year horizon, through the year 2030, as described on page 2-10 of the Project Description in the Draft EIR. This is the horizon year for the future traffic volumes and levels of service described on page 3.2-15. A revision has been provided on page 3.2-15 of the Draft EIR to clarify this horizon year. See Table 4-1 of this Final EIR. Data on existing traffic volumes for State highway facilities was requested from the permanent count station database maintained by Caltrans HQ and was used directly in the General Plan analysis.
- A2-10: As described in the Physical Setting on page 3.2-1 of the Draft EIR, the study area for the transportation analysis is bound by the Mokelumne River to the north, ½ mile west of Lower Sacramento Road to the west, East Hogan Lane to the south, and the Central California Traction Railroad to the east. This area includes State Route 99, whose potential impacts are reported in Table 2.3-4, on page 3.2-21 of the Draft EIR. However, this study area does not include Interstate 5 located within five miles to the west of the city. Proposed General Plan policy T-P7 commits the City to work with the regional metropolitan transportation organization on regional transportation funding, including the update of regional transportation impact fees.

Page 3.2-24 of the Draft EIR describes the planned projects to widen SR 99 through Lodi that are referenced in this comment. As described in the Draft EIR, because those freeway widening projects do not have environmental clearance or identified funding, they cannot be assumed in the EIR analysis, but it is acknowledged that those projects would help to address the capacity shortfalls identified as a significant impact.

The City of Lodi has a transportation impact fee program to collect "fair share" contributions from new development projects. The fee program is referenced in General Plan policy T-P2, and the City's commitment to update the fee program is included in General Plan policy T-P5. The City is willing to discuss with Caltrans the potential for expanding the transportation impact fee program to include contributions to State highway facility improvements. However, it should be noted that the future traffic volumes and Levels of Service on SR 99 described in the Draft EIR are the result of increased growth in Lodi combined with increased regional traffic demand (i.e., traffic that passes through Lodi but does not stop). Therefore, the "fair share" contribution toward SR 99 improvements from new development in Lodi may be a relatively small proportion of the overall cost of the improvements. In order for a revised impact fee program to be adopted, the likely sources of funding for the remainder of the improvement costs would need to be identified. The City will coordinate with Caltrans on this issue. A new policy will be added to the proposed General Plan:

- T-PNEW: Participate in discussions with Caltrans and neighboring jurisdictions to develop a fair-share fee program for improvements to regional routes and state highways. This fee should reflect traffic generated by individual municipalities and pass-through traffic.
- A2-11: The Draft EIR was sent to the Air Resources Board.
- A2-12: The proposed General Plan identifies a range of policies to improve mobility and maintain Level of Service standards, including suggestions recommended by the reviewer: access management, site design, and on-site development circulation. In addition to the City's Subdivision Ordinance, which specifies required street improvements for different types of development projects, these methods are exemplified by the following policies:
 - T-P9: Design streets in new developments in configurations that generally match
 and extend the grid pattern of existing city streets. This is intended to disperse traffic and provide multiple connections to arterial streets. Require dedication, widening, extension, and construction of public streets in accordance with the City's
 street standards. Major street improvements shall be completed as abutting lands
 develop or redevelop. In currently developed areas, the City may determine that
 improvements necessary to meet City standards are either infeasible or undesirable.
 - T-P10: Maintain, and update as needed, roadway design standards to manage vehicle speeds and traffic volumes.
 - CD-P14: Minimize pavement widths (curb-to-curb) along Mixed Use Corridors to prioritize pedestrian and bicycle movement, while ensuring adequate street width for traffic flow.
 - CD-P34: Minimize curb cuts to expand pedestrian space and increase the supply of curbside parking. Methods include requiring abutting new developments to share a single access point from the road and allowing only one curb cut per parcel.
 - CD-P35: Require new office development to be designed to address not just automobile access, but also potential for transit access, and allowing lunchtime pedestrian access to adjacent uses. Locate new office development along the street edge, with the main entrance facing the street. Parking should not be located between the street and building.
- A2-13: The following policy in the proposed General Plan assures the City's continued cooperation with Caltrans and other agencies to make improvements that accommodate future growth:
 - T-P3: Work collaboratively with San Joaquin County, San Joaquin Council of Governments, and Caltrans to successfully implement transportation improvements in the vicinity of Lodi.

A2-14: This comment regarding truck routes represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. This issue is addressed in the response to comment A2-2 above.

A3: Public Utilities Commission

- A3-1: The City appreciates the Public Utilities Commission's commitment to rail safety in California. The following proposed General Plan policies seek to assure the City's commitment to funding and implementing rail safety measures:
 - T-P4: Maintain and update a Capital Improvements Program so that identified improvements are appropriately prioritized and constructed in a timely manner.
 - T-P5: Update the local transportation impact fee program, consistent with General Plan projections and planned transportation improvements.
 - T-P31: Coordinate with the California Public Utilities Commission to implement future railroad crossing improvements.
 - T-P32: Require a commitment of funding for railroad crossing protection devices from private development requiring new railroad spurs.

A4: City of Stockton

- A4-1: This comment regarding policies for Urban Reserve areas represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. Notably, proposed General Plan policies ensure that the city expands only as needed and only when infrastructure has been provided:
 - GM-P2EDIT: Target new growth into identified areas, extending south, west, and southeast. Ensure contiguous development by requiring development to conform to phasing described in Figure 3-1 [of the proposed General Plan]. Enforce phasing through permitting and infrastructure provision. Development may not extend to Phase 2 until Phase 1 has reached 75% of development potential, and development may not extend to Phase 3 until Phase 2 has reached 75% of development potential. In order to respond to market changes in the demand for various land use types, exemptions may be made to allow for development in future phases before these thresholds in the previous phase have been reached.
 - GM-G2: Provide infrastructure—including water, sewer, stormwater, and solid waste/recycling systems—that is designed and timed to be consistent with projected capacity requirements and development phasing.
 - GM-P8: Coordinate extension of sewer service, water service, and stormwater facilities into new growth areas concurrent with development phasing. Decline requests for extension of water and sewer lines beyond the city limit prior to the relevant development phase and approve development plans and water system extension only when a dependable and adequate water supply for the development is assured.
- A4-2: This comment regarding the proposed General Plan's designation of an Armstrong Road Agricultural/Cluster Study Area represents a comment on the proposed General

Plan and not on the Draft EIR, and therefore does not require a response here. The City acknowledges that the City of Stockton has adopted an open space/agricultural land use along this northern boundary. For information purposes, more detail on the Armstrong Road Agricultural/Cluster Study Area is provided in Table 3-1 in the Growth Management Element of the proposed General Plan. This table describes potential policy tools, such as coordinating with other public agencies and avoiding uses that would diminish the agriculture/open space character of the greenbelt.

- A4-3: This comment regarding the Armstrong Road Agricultural/Cluster Study Area represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. However, for information purposes, we propose additional text in the proposed General Plan to describe the Armstrong Road Agricultural/Cluster Study Area, since it is shown on the Land Use Diagram:
 - Armstrong Road Agricultural/Cluster Study Area: This overlay designation is intended to maintain a clear distinction between Lodi and Stockton. In coordination with relevant public agencies and property owners, the City will continue to study this designation area to determine a strategy to meet these objectives.

Notably, additional information and policy direction about the Study Area is described in the Growth Management Element of the proposed General Plan, as mentioned in the response to comment A4-2, above.

- A4-4: A revision has been provided to page 3.2-21 of the Draft EIR to address this comment about traffic volumes and Level of Service on arterial roadways south of Harney Lane. See Table 4-1 of this Final EIR.
- A4-5: Comments noted. The Draft EIR assesses potential impacts on the current staffing levels and facilities for police and fire protection. The City respectfully disagrees that it needs to provide response time standards. Instead, the proposed General Plan calls for establishing even more detailed thresholds to ensuring safety:
 - GM-P22: Develop a Fire and Police Services Master Plan that would establish thresholds and requirements for fire and police facilities, staffing, and building features. The Fire and Police Services Master Plan should consider the following:
 - Typical nature and type of calls for service;
 - Fire prevention and mitigation measures, such as sprinklers, fire retardant materials, and alarms;
 - Appropriate measures for determining adequate levels of service; and
 - Locations and requirements for additional facilities and staffing.

A5: San Joaquin Council of Governments

A5-1: As the reviewer notes, although there are two public airports that lie within the city's Planning Area, the airports do not lie within the city limits and are therefore under San Joaquin County's jurisdiction. The City of Lodi will serve as the lead agency when it has

the primary responsibility for approving a project that may have a significant impact upon the environment.

A6: San Joaquin Council of Governments

- A6-1: The City acknowledges that, according to Government Code Section 65089.4, it will be required to prepare Deficiency Plan for roadway segments that are monitored as part of the Regional Congestion Management Program (RCMP) and which exceed the RCMP's stipulated Level of Service standard (currently LOS D), within 12 months of when the deficiency is identified.
- A6-2: The City acknowledges that RCMP roadway segments in Lodi that operate at the RCMP Level of Service standard (currently LOS D) will be required to prepare a plan that analyzes specific strategies for operational preservation and transportation demand management. The City further acknowledges that SJCOG is preparing a Regional Travel Demand Management Action Plan that will offer guidance for this requirement.
- A6-3: The City acknowledges that future projects in Lodi may be required to assess potential impacts on RCMP roadway segments within traffic impact analysis studies and/or environmental review documents, if the project generates 125 or more peak hour trips.

A7: San Joaquin County, Community Development Department

A7-1: This comment regarding the Armstrong Road Agricultural/Cluster Study Area represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. For further information about the Armstrong Road Agricultural/Cluster Study Area, see response to Letter A4, comment A4-3.

ORGANIZATIONS/INDIVIDUALS

BI: Jane Wagner-Tyack

- B1-1: This comment regarding the Lodi Urban Water Cycle graphic represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here. Notably, the sources of the water supply are documented on page 3.13-13 of the Draft EIR.
- B1-2: The City appreciates the reviewer's interest in ensuring an adequate water supply. Page 3.13-13 of the Draft EIR describes the potential increase in groundwater safe-yield, as the city grows and its land area increases. However, the proposed General Plan ensures that agricultural land will not be prematurely converted to urban uses in order to gain additional water supply. Proposed policies seek to ensure responsible growth that protects agricultural land and ensures that adequate infrastructure and water resources are in place before development can proceed:

- C-P3: Support the continuation of agricultural uses on lands designated for urban uses until urban development is imminent.
- GM-G2: Provide infrastructure—including water, sewer, stormwater, and solid waste/recycling systems—that is designed and timed to be consistent with projected capacity requirements and development phasing.
- GM-G3: Promote conservation of resources in order to reduce the load on existing and planned infrastructure capacity, and to preserve existing environmental resources.
- GM-P2EDIT: Target new growth into identified areas, extending south, west, and southeast. Ensure contiguous development by requiring development to conform to phasing described in Figure 3-1 [of the proposed General Plan]. Enforce phasing through permitting and infrastructure provision. Development may not extend to Phase 2 until Phase 1 has reached 75% of development potential, and development may not extend to Phase 3 until Phase 2 has reached 75% of development potential. In order to respond to market changes in the demand for various land use types, exemptions may be made to allow for development in future phases before these thresholds in the previous phase have been reached.
- GM-P7: Ensure that public facilities and infrastructure—including water supply, sewer, and stormwater facilities—are designed to meet projected capacity requirements to avoid the need for future replacement and upsizing, pursuant to the General Plan and relevant master planning.
- GM-P8: Coordinate extension of sewer service, water service, and stormwater facilities into new growth areas concurrent with development phasing. Decline requests for extension of water and sewer lines beyond the city limit prior to the relevant development phase and approve development plans and water system extension only when a dependable and adequate water supply for the development is assured.
- B1-3: This comment supporting use of gray water or rainwater for non-potable uses represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here.
- B1-4: The Draft EIR makes interchangeable references to the San Francisco Bay-San Joaquin River Delta and the Delta. This full name and abbreviation are provided on page 3.7-1 of the Hydrology and Water Quality section.
- B1-5: A revision has been provided on page 3.7-1 of the Draft EIR to address this comment and proper spelling of the Camanche Reservoir. See Table 4-1 of this Final EIR.
- B1-6: A revision has been provided to page 7.2-4 of the Draft EIR to address this comment regarding groundwater basins. See Table 4-1 of this Final EIR.
- B1-7: During preparation of the Draft EIR, the analysis of potable water was revised to update projections from the most recent urban water management plan and other sources to reflect the development potential accommodated in the proposed General Plan Land Use Diagram. The water demand and supply analysis, presented in Impact

3.13-1, beginning on page 3.13-2, supersedes the proposed General Plan and identifies sufficient supply to meet demand during normal years. In dry years, demand is projected to exceed supply by approximately 4,040 acre-feet. However, growth management phasing, water conservation measures, recycled water, and graywater systems, are expected to bridge this gap. The proposed General Plan will be updated prior to adoption to reflect this updated analysis.

Relevant proposed General Plan policies that would ensure that a sufficient water supply is available to meet needs and that promote potable water conservation are identified in the impact statement, beginning on page 3.13-15. These policies include: GM-G2, GM-G3, GM-P7, GM-P8, GM-P9, GM-P10, GM-P11EDIT, GM-P12, GM-P13, GM-P14, and GM-P15EDIT. GM-P8 in particular ensures that development will not proceed until an adequate water supply has been identified:

- GM-P8: Coordinate extension of sewer service, water service, and stormwater facilities into new growth areas concurrent with development phasing. Decline requests for extension of water and sewer lines beyond the city limit prior to the relevant development phase and approve development plans and water system extension only when a dependable and adequate water supply for the development is assured.
- B1-8: The City appreciates the reviewer's interest in ensuring water quality levels. The Draft EIR acknowledges existing wastewater deficiencies and an implementation program to meet existing and future demand. While the proposed General Plan will require new facilities to accommodate projected wastewater flows and required treatment capacity, it also identifies the infrastructure needed over the life of the Plan, and includes policies that require the provision of infrastructure in a timely manner. In fact, many of the required infrastructure improvements are already underway or are already part of existing master plans. In addition, project level environmental analysis will be required for any infrastructure development that could result in environmental impacts. Impact 3.13-2, beginning on page 3.13-17, identifies the relevant improvements and proposed General Plan policies that address this capacity issue. Moreover, the proposed General Plan also identifies policies to maintain and improve water quality levels in local and regional water bodies:
 - C-P-26: Monitor water quality regularly to ensure that safe drinking water standards are met and maintained in accordance with State and EPA regulations and take necessary measures to prevent contamination. Comply with the requirements of the Clean Water Act with the intent of minimizing the discharge of pollutants to surface waters.
 - C-P-27: Monitor the water quality of the Mokelumne River and Lodi Lake, in coordination with San Joaquin County, to determine when the coliform bacterial standard for contact recreation and the maximum concentration levels of priority pollutants, established by the California Department of Health Services, are exceeded. Monitor the presence of pollutants and variables that could cause harm to fish, wildlife, and plant species in the Mokelumne River and Lodi Lake. Post signs at areas used by water recreationists warning users of health risks whenever the coli-

- form bacteria standard for contact recreation is exceeded. Require new industrial development to not adversely affect water quality in the Mokelumne River or in the area's groundwater basin. Control use of potential water contaminants through inventorying hazardous materials used in City and industrial operations.
- C-P-28: Regularly monitor water quality in municipal wells for evidence of contamination from dibromochloropropane (DBCP), saltwater intrusion, and other toxic substances that could pose a health hazard to the domestic water supply. Close or treat municipal wells that exceed the action level for DBCP.
- C-P-29: Minimize storm sewer pollution of the Mokelumne River and other waterways by maintaining an effective street sweeping and cleaning program.
- C-P-30: Require, as part of watershed drainage plans, Best Management Practices, to reduce pollutants to the maximum extent practicable.
- C-P-31: Require all new development and redevelopment projects comply with the
 post-construction Best Management Practices (BMPs) called for in the Stormwater
 Quality Control Criteria Plan, as outlined in the City's Phase 1 Stormwater NPDES
 permit issued by the California Water Quality Control Board, Central Valley Region. Require that owners, developers, and/or successors-in-interest to establish a
 maintenance entity acceptable to the City to provide funding for the operation,
 maintenance, and replacement costs of all post-construction BMPs.
- C-P-32: Require, as part of the City's Storm Water NPDES Permit and ordinances, the implementation of a Grading Plan, Erosion Control Plan, and Pollution Prevention Plan during the construction of any new development and redevelopment projects, to the maximum extent feasible.
- C-P-33: Require use of stormwater management techniques to improve water quality and reduce impact on municipal water treatment facilities.
- C-P-34: Protect groundwater resources by working with the county to prevent septic systems in unincorporated portions of the county that are in the General Plan Land Use Diagram, on parcels less than two acres.
- C-P-35: Reduce the use of pesticides, insecticides, herbicides, or other toxic chemical substances by households and farmers by providing education and incentives.
- B1-9: The City appreciates the reviewer's support for potable water conservation and use of grey and recycled water. This comment does not raise environmental issues under CEQA.
- B1-10: This comment does not raise environmental issues under CEQA. The Draft EIR represents a good faith effort to disclose all significant environmental effects of implementing the proposed General Plan, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the proposed Plan. Decision makers are required to use this informational document to make a decision about the Plan contents and adoption (CEQA Guidelines Section 15090).

B2: Herum/Crabtree Attorneys

- B2-1: This comment—discussing the PRR (Planned Residential Reserve) land use designation, which exists in the current General Plan—represents a comment on the existing and proposed General Plan and not on the Draft EIR, and therefore does not require a response here.
- B2-2: The reviewer is correct in saying that "an environmentally superior alternative does not need to match all the project objectives in order to be a viable alternative." As described on page 4-20 of the Draft EIR, Alternative A was selected as the environmentally superior alternative for having the least environmental impact relative to the proposed General Plan and Alternative B, while meeting most project objectives.
- B2-3: The reviewer is correct that elements from two or more alternatives may be blended to create a new alternative and meet the two percent growth policy. However, the environmental impacts generally correlate with population and job projection estimates. Alternative A enjoys the benefits of lower vehicle miles traveled and greenhouse gas emissions compared with the proposed General Plan in part due to the fact that it results in fewer residents and jobs. Adding land area to accommodate the additional population to meet the two percent growth policy will result in additional environmental impacts, likely similar to those identified in the project.
- B2-4: As described on page 4-1 of the Draft EIR, according to CEQA Guidelines, the range of alternatives "shall include those that could feasibly accomplish *most* of the basic purposes of the project and could avoid or substantially lessen one or more of the significant impacts" (Section 15126.6(c)) (emphasis added). The project objectives, as described on page 2-4 of the Draft EIR, were synthesized during the planning process, as a result of input from community members, City staff, and decision makers. They articulate a vision for Lodi's future in the next 20 years. When the City set out to define alternatives to the proposed General Plan, it had to balance the basic project objectives with opportunities for substantially lessening significant environmental effects.

The Draft EIR represents a good faith effort to disclose all significant environmental effects of implementing the proposed General Plan, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the proposed Plan. Decision makers ultimately decide on a preferred project, and prepare findings, facts in support of findings, and a statement of overriding considerations, as necessary, to support their decision.

B3: Bruce Fry

- B3-1: This comment, regarding the reviewer's preference for Alternative A, does not raise environmental issues under CEQA; however, as a part of the public record, the City will take this comment into account in its decision on the proposed General Plan.
- B3-2: This comment—discussing the PRR (Planned Residential Reserve) land use designation, which exists in the current General Plan—represents a comment on the

existing and proposed General Plan and not on the Draft EIR, and therefore does not require a response here.

- B3-3: The objectives of the proposed General Plan clarify the proposed growth pattern, as described on page 2-4 of the Draft EIR (emphasis added):
 - Objective #1: Compact Urban Form. The Plan enhances Lodi's compact urban form, promoting infill development downtown and along key corridors, while also outlining growth possibilities directly adjacent to the existing urban edge. The City's overall form will be squarish, reinforcing the centrality of downtown, with virtually all new development located within three miles from it.
 - Objective #2: Mokelumne River as the City's Northern Edge. The Lodi community has expressed a desire to see the river remain as the city's northern edge. The southern bank of the river (within the city) is occupied by residential uses and streets do not reach the river. Therefore, connectivity across the river to knit the urban fabric would be challenging if growth were to extend northward.
 - Objective #7: Agricultural Preservation Along Southern Boundary. In order to preserve agriculture and maintain a clear distinction between Lodi and Stockton, the Plan acknowledges the Armstrong Road Agricultural/Cluster Study Area along the south edge of Lodi, from Interstate 5 (I-5) to State Route (SR) 99, and south to Stockton's Planning Area boundary.

The Land Use Diagram presented in Figure 2.3-1 on page 2-7 of the Draft EIR does depict urban development continuing south up to Hogan Lane, as the reviewer recommends, from Lower Sacramento Road on the west, past the Central California Traction Railroad to the east. However, it recommends stopping urban development at that boundary due to the reasons identified in the three objectives above.

- B3-4: This comment, recommending that the area south of Harney Lane and north of Armstrong Road be designated as Urban Reserve, represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here.
- B3-5: The water supply analysis presented on page 3.13-13 of the Draft EIR represents a good faith effort to evaluate the potential environmental effects of the proposed General Plan. The assumptions used are the best available and reflect existing knowledge and data. In the case of water supply, the analysis relies on the City's adopted 2005 Urban Water Management Plan (UWMP).

As described on page 3.13-13 of the Draft EIR, during dry years, the reliable water supply is estimated at 25,310 acre-feet. As a result, potential water shortage at full development could be 4,040 acre-feet in a dry year, meeting 86% of demand. The analysis on page 3.13-15 further concludes that because of recycled water supply opportunities, gray water and rain water catchment systems, and proposed General Plan policies that both restricts development until water supply is assured and promote

potable water conservation, supply will meet demand, making the potential impact less than significant.

A revision to page 3.13-15 of the Draft EIR (see Table 4-1 in Chapter 4 of this Final EIR) describes the City's Water Conservation Ordinance which further supports water conservation, enforces penalties when water is wasted, and permits the City to take additional conservation measures in the case of a water supply emergency. While the draft EIR does not evaluate scenarios where UWMP assumptions change, such as groundwater pumps malfunctioning, as hypothetically referenced by the reviewer, these revisions do explain the City's regulations during a water emergency situation.

- B3-6: Comment noted regarding a preference for the City to pursue surface water rather than groundwater sources and not on the Draft EIR, and therefore does not require a response here.
- B3-7: Comment noted regarding the reviewer seeking additional analysis of water demand. The demand analysis presented on page 3.13-12 of the Draft EIR represents the best effort to evaluate the potential environmental effects of the proposed General Plan. The assumptions used are the best available and reflect existing knowledge and data. The water analysis will be updated as part of the City's regular updating of its Urban Water Management Plan, as highlighted in policy GM-P10 of the proposed General Plan: "...The Urban Water Management Plan should be updated on a five year basis in compliance with State of California mandated requirements. Future plans should be developed in 2010, 2015, 2020, 2025, and 2030."
- B3-8: Comment noted regarding the reviewer seeking additional analysis of water quality. The potential impacts of the proposed General Plan in terms of water quality are identified in the impact analysis beginning on page 3.7-8 of the Draft EIR. Potential impacts are considered less than significant given the regulatory requirements and standards to which existing and future development must comply. Additionally, General Plan policies have been proposed to ensure potential environmental effects on water quality remain less than significant.
- B3-9: This comment, regarding the agricultural conservation program, represents a comment on the proposed General Plan and not on the Draft EIR, and therefore does not require a response here.

B4: Joseph L. Manassero

- B4-1: This comment—discussing the PRR (Planned Residential Reserve) land use designation—represents a comment on the existing and proposed General Plan and not on the Draft EIR, and therefore does not require a response here.
- B4-2: As described on page 4-20 of the Draft EIR, Alternative A was selected as the environmentally superior alternative for having the least environmental impact relative to the proposed General Plan and Alternative B, while meeting most project objectives. The reviewer is correct in saying that additional land area could be added to the east

and west of Alternative A in order to meet the two percent growth policy. However, the environmental impacts generally correlate with population and job projection estimates. Alternative A enjoys the benefits of lower vehicle miles traveled and greenhouse gas emissions compared with the proposed General Plan in part due to the fact that it results in fewer residents and jobs. Adding land area to accommodate the additional population to meet the two percent growth policy will result in additional environmental impacts, likely similar to those identified in the project.

- B4-3: The City respectfully disagrees with the reviewer's comment. The Draft EIR is an informational document that represents a good faith effort to disclose all significant environmental effects of implementing the proposed General Plan. It identifies possible ways to minimize the significant effects and describes reasonable alternatives to the proposed Plan. It does not recommend the project nor any of the alternatives. Rather it is intended to assist the community in understanding potential impacts and ultimately to aid decision makers to decide on a preferred project, and prepare findings, facts in support of findings, and a statement of overriding considerations, as necessary, to support their decision.
- B4-4: This comment, regarding the reviewer's preference for Alternative A, does not raise environmental issues under CEQA; however, as a part of the public record, the City will take this comment into account in its decision on the proposed General Plan.

- B7-3: See Letter B4, response to comment B4-3.
- B7-4: See Letter B4, response to comment B4-4.

B8: Jack D. Ward

- B8-1: The Environmental Impact Report does not recommend Alternative A nor does it recommend the proposed General Plan. The Draft EIR represents a good faith effort to disclose all significant environmental effects of implementing the proposed General Plan, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the proposed Plan. Decision makers may then use this informational document to make a decision about Plan contents and adoption.
- B8-2: This comment, regarding the reviewer's preference for Alternative A, does not raise environmental issues under CEQA; however, as a part of the public record, the City will take this comment into account in its decision on the proposed General Plan.

ORAL TESTIMONY

C-I: Planning Commission Hearing on Draft EIR

Oral comments were heard at a Planning Commission public hearing on the Draft EIR, on December 9, 2009. Jane Wagner-Tyack voiced oral comments, but also provided the same comments in a letter. Responses to this letter, Letter B1, are provided above. All other comments heard represented comments on the proposed General Plan and did not raise environmental issues under CEQA and therefore will not be addressed in this response to comments on the Draft EIR.

4 Revisions to the Draft EIR

This chapter includes the revisions to the Draft EIR. These revisions have been made in response to comments or based on review by the EIR preparers. The revisions appear here in the order they appear in the Draft EIR. Text additions are noted in <u>underline</u> and text deletions appear in strikeout.

The City may refine the proposed General Plan based upon agency and public comments. These changes will not alter the conclusions presented in the Draft EIR regarding significant environmental impacts or mitigation measures and therefore do not trigger recirculation. Revisions to the Draft EIR are described in Table 4-1 and organized by chapter, page and table or figure, where applicable. Certain revised pages (including revised figures) have been appended to the end of this chapter, for clarity purposes; these pages are referenced in the table.

Table 4-1: Revisions to the Draft EIR

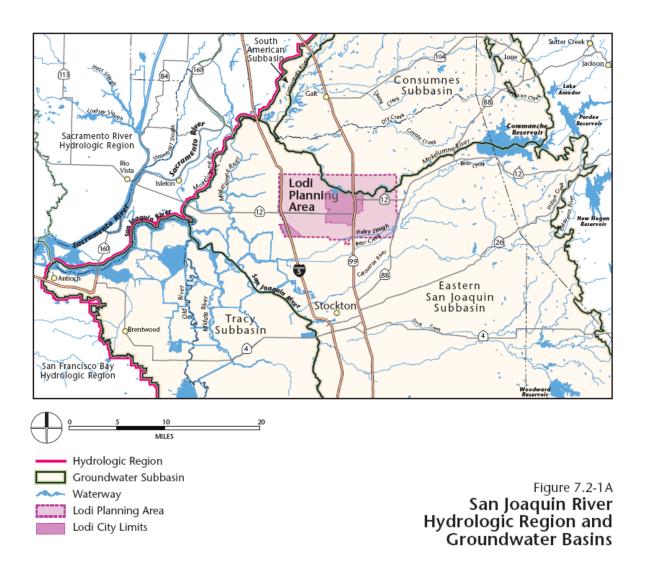

Chapter/ Section	Page	Correction
3.2	3.2-15	The second sentence of the first paragraph is amended as follows:
		Table 3.2-4 presents the existing and projected (2030) traffic volumes and LOS for individual roadway segments throughout the city.
3.2	3.2-21	Add paragraph following Table 3.2-4:
		Future (2030) traffic volumes and LOS values were assessed for two additional north-south segments, between Harney Lane and Armstrong Road:
		• Lower Sacramento Rd: 24,500, LOS B
		 West Lane: 28,500, LOS D
		Existing daily traffic volumes and LOS were not assessed. These additional segments do not alter the conclusions presented in the Draft EIR regarding significant environmental impacts and therefore do not trigger recirculation
3.2	3.2-22	The following text is added after the first paragraph of the Impact Methodology section. The referenced Table 3.2-4A may be found at this end of this chapter.
		The traffic demand forecasting model summarizes land uses, street network, travel characteristics, and other key factors. Using these data, the model performs a series of calculations to determine the amount of trips generated, where each trip begins and ends, and the route taken by the trip. Trip generation is estimated by land use, using factors, as described in a new table, Table 3.2-4A. These trips are aggregated to determine daily traffic volumes and total vehicle trips in addition to other outcomes.
3.7	3.7-1	The Comanche Camanche Reservoir is located on the Mokelumne River approximately 20 miles northeast of the Planning Area (City of Lodi, 1988; Department of Water Resources, 2006).
3.7-4		A second map is added to this page to show groundwater basins. This new map, Figure 7.2-1A is appended at the end of this section.
3.13-15		The following text is added after the third paragraph under the heading "Policies and Mitigations:"

Third, the City's Water Conservation Ordinance promotes water conservation by restricting water of landscaping to certain days and hours. (For example, odd numbered street addresses may only water landscaping on Wednesdays, Fridays and Sundays, and watering between May I and September 30, between IOAM and 6PM is prohibited.) The ordinance also specifies enforcement procedures, including sanctions for non-compliance. Most importantly, in relation to dry year scenarios, the ordinance also permits the City to place additional restrictions on water use in an emergency situation to manage water pressure and/or supply demands.

Table 3.2-4A: Daily Vehicle Trip Generation Rates

		Daily Trips Generated per Unit	
Land Use Type	Units		
Residential			
Single Family	Dwelling Units	11	
Multi-Family	Dwelling Units	7	
Duplex	Dwelling Units	9	
Mobile Home	Dwelling Units	4.99	
Retirement Home	Thousand Square-feet	3.3	
Non-Residential			
General Commercial/Shopping Center	Thousand Square-feet	45	
Super Store	Thousand Square-feet	60	
Downtown/Neighborhood Commercial	Thousand Square-feet	25	
Office	Thousand Square-feet	15	
Light Industrial	Thousand Square-feet	6.97	
Heavy Industrial	Thousand Square-feet	1.7	
Public Uses	Thousand Square-feet	1	
High School	Students	1.71	
Elementary & Junior High School	Students	1.29	
Hotel	Rooms	8.92	
Hospital	Thousand Square-feet	17.57	
Highway Commercial	Thousand Square-feet	845.6
